**Election/Restriction**

***Introduction***

1. The following is an election/restriction in response to the communications received on August 8, 2001. Claims 1-25 are restricted in this application.

***Election/Restrictions***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, 10-22, and 24-25 are drawn to performing business planning using a structured process to provide a marketing solution to an organization, classified in class 705, subclass 10.
  - II. Claim 9 and 23 are drawn to the details of the various stages of used in performing business planning, classified in class 705, subclass 10.
3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the detailed steps of the subcombination, such as gathering baseline information defining the current position of the organization, developing strategy hypotheses and a data collection plan for achieving the objectives, identifying opportunities for providing a marketing solution, developing a high-level plan, developing a measurement system

Art Unit: 3623

and assessing risk in connection with implementing the marketing solution, determining criteria for assessing the success of the solution and projecting the impact of changes in the organization caused by the solution, or developing a detailed action plan to implement the solution. Because performing the steps in the subcombination is not required when performing the steps recited by the combination, the subcombination is not needed for the combination to be patentable. The subcombination has separate utility such as a detailed process plan that can be implemented for various purposes, such as a sales strategy plan. As a detailed strategy plan, invention II does not require any portion of invention I to have utility and can be used in combination with other plans, such as a sales strategy plan or a product research plan. Because the subcombination is both not necessary for the combination to be patentable and the subcombination has utility in other combinations, these inventions are distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
